**West Star Aviation Announces FAA Approval for
Hawker Wing Seal Modification**

East Alton, IL, June 25, 2008 – West Star Aviation Inc. is pleased to announce they have received FAA approval for modification of a wing to fuselage fairing seal on all HS-125 series Hawkers, including the new 900XP and 750.

Developed at their Grand Junction, Colorado Hawker Beechcraft Authorized Service Center, this modification replaces the OEM seal, which was glued to the wing upper surface and was prone to deterioration and coming loose in flight. This modern, silicone based “P” seal is tucked under the fairing panel, is not visible on the wing surface, and reduces the labor hours required for removal and installation of this large access panel. The wing also looks much cleaner with the new seal.

The modification can be completed at the Grand Junction, Colorado or Dallas, Texas facilities and will improve maintainability, appearance, and reliability to the aircraft.

West Star Aviation, Inc. specializes in airframe and engine repair and maintenance, major modifications, avionics installation and repair, interior refurbishment, paint, parts, surplus avionics sales, and accessory services. In addition to its facilities in East Alton, IL; Grand Junction, CO; and Dallas, TX, West Star Aviation has a Hiawatha, IA location that specializes in the acquisition and sales of surplus avionics. The company also provides complete FBO services for transient aircraft at its newly remodeled East Alton and Grand Junction facilities. West Star Aviation, Inc. is an industry leader in technical experience and expertise and provides world-class customer services in all of the organization’s divisions.
